CAREER OBJECTIVE

Computer Science and Engineering student with a strong foundation in programming, data structures, algorithms, and problem solving. Interested in software development and AI-driven solutions, with hands-on experience in graph-based applications using Java and Python.

EDUCATION

Bachelor of Technology — Computer Science and Engineering

Ravindra College of Engineering for Women, Kurnool | Expected 2026 | 3rd Year | CGPA: 8.02/10

TECHNICAL SKILLS

Programming: Java, Python (OOP), C, SQL

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Graph Theory

Tools & Technologies: VS Code, Git, GitHub

Soft Skills: Communication, Problem Solving, Quick Learner, Team Collaboration

PROJECT

AI-Powered Ecosystem for Criminal Network Analysis | Python, Java, Graph Theory, LangGraph, React.js, Three.js, D3.js

- Developed an AI-powered intelligence platform that integrates fragmented data sources into a unified graph-based network for relationship analysis.
- Designed six specialized AI agents — NERVE, GRAPHOS, CENTRUM, ANOMALIS, SYNAPSE, and LINGUA — orchestrated using LangGraph for entity extraction, relationship mapping, network analysis, pattern detection, intelligence synthesis, and natural-language querying.
- Implemented PageRank, Betweenness Centrality, Louvain Community Detection, and Isolation Forest to identify important network entities and hidden communities.
- Developed an Explainable AI module for evidence-supported legal documentation with audit trails.
- Built responsive 3D network visualization using React.js, Three.js, and D3.js with classification of network entities.
- Reported 95% entity extraction accuracy, 85% network detection accuracy, and 70% reduction in manual investigation time.

ACHIEVEMENTS

- Solved 100+ problems on LeetCode, focusing on Data Structures and Algorithms.

CERTIFICATIONS

- MATLAB Onramp
- MATLAB Simulink Onramp
- ServiceNow Micro-Certification

LANGUAGES

English, Hindi, Telugu

INTERESTS

Singing, Solving Puzzles
